SUMMARY

Software Developer with 2 years of experience, dedicated and hardworking in both project execution and task management. Skilled at motivating team members and fostering collaboration. An enthusiastic and keen learner of new technologies, seeking a project to further enhance skills and knowledge.

TECHNICAL PROFICIENCY

- React JS
- Javascript ES6+
- Redux for State Management
- RESTful APIs and JSON
- CSS and Styling Libraries

Tools:

- Visual Studio Code
- Git
- JIRA
- Vite
- Postman
- React Developer Tools

WORK EXPERIENCE

Apr 2023 – Present

Software Developer

Dart Innovations and Technologies

- Developed dynamic and interactive web applications using React.js to deliver engaging user experiences
- Integrated UI component libraries like Material-UI, Ant Design to create visually appealing and responsive interfaces
- Managed asynchronous data fetching using Axios and Redux Thunk for efficient API integration
- Utilizing Redux Toolkit, Context API for global state management.
- Implemented Firebase to enable real-time updates and push notifications for enhanced user engagement
- Utilized Jira for agile task tracking and sprint management.
- Worked with WordPress to develop and customize websites and e-commerce platforms

PROJECTS

VetNVet

VetNVet is a cloud based SAAS model web and mobile applications for Doctors. Doctors can manage all patient records including their visit details, prescription, medication and billing. Vetsoft enables Doctor's send reminders and visit details by Messaging using Email, Whatsapp and In-app. The mobile App of VetNVet will be exclusive to Doctors where the interface will be intuitive that let's use on move. VetNVet also has a client's mobile App which will enable clients to track their medical records, visit details and messages.

Role:

- Building Web Front using React
- Integration with REST API built using .Net core

AXON-Patient Portal

This project involves of 2 reports one is justification and another one is patient reports. The patient reports also have a mobile app with push notification and bio metric authentication. The web portal also has push notification integration using firebase. The portal is AD integrated with group based permissions. The web portal also contains push notification as well auto-refresh of dashboard

Role:

- Building Web Front using React
- Integration with REST API built using .Net core
- Integration with Firebase.

Lead Handler

Lead Handler is a tool to manage leads. It is integrated with Active Directory so all users belong to particular groups can login and access the system based on the rights given. It has an inline editor to ease up lead generation team for faster entry. It also has many filters such as segment, country, lead by, date wise etc.

Role:

- Building Web Front using React
- Integration with REST API built using .Net core

Active Directory Web (AD Web)

AD Web is a product of DART. AD web is complete web based Active Directory management system where Super admin, Domain admin and OU admin can manage their users, computers and groups without logging into their Active Directory server. They can do everything they do at AD management console such as Creating Users, Group Assignment, Password Reset, Unlock Locked users, Create Groups, Create OUs etc. Super admin can add and administrate any number of Active Directory domain controllers. Using AD Web administrators can automate password expiration reminders easily. AD Web has features such as bulk update, portal brandings and more.

Role:

- Building Web Front using React
- Integration with REST API built using .Net core

EDUCATION

MountZion College of Engineering and Technology.

Pudukkottai 2018 -2022

Bachelor of Engineering

CERTIFICATES

- Full Stack Development Trainig
-
